

1. How does the device Operate?

Answer: FM transmitter is provided by Battery DC 3.3V, Through power supply switch (Input Voltage is AC 120V/60Hz) or car adapter (Input Voltage is DC 12V) for charging. Frequencies are selected by set key(Please see the user manual) on the EUT. Have a frequency range:88.1-107.9MHz are available.

2. Provide information on the device and its antenna.

Answer: The antenna is a built-in trace on the circuit board. (please see the attached: user manual and circuit)

3. How is it installed?

Answer: Through the bracket installed onto a suitable location of Car's windscreen or side window, No other installation is required.

4. What test procedure was used?

Answer: ANSI C63.4-2003.

5. If tested in a car, how was it configured?

Answer: It was not tested in an automobile. It was tested in an 3 meter range as shown in the Test Set-Up photographs.

6. Was the tuning range properly verified? The test lab should indicate in the report that the tuning controls were manually adjusted to verify the maximum tuning range.

Answer: only 88.1, 98.1, 107.9MHz is available; Please see the test report (Page 3 of 8) and manual.

7. Was the bandwidth properly tested with the maximum audio input? The test lab should describe the audio input signal (use a typical audio file from a typical device) - DO NOT use 1kHz tone from signal generator as specified under ETSI EN 301 357-1)

Answer: we played a song from onself MP3 function with the maximum audio input.

8. Does the device operate in a vehicle? Please state that this was verified.

Answer: It was not test in a vehicle.
